

Sylvester Turner Park

DAC provided construction management services for an extensive improvement to the 20+ acre Sylvester Turner Park-- previously named West Little York Park. Improvements ranged from new baseball fields to a wet lands demonstration and educational area.

The original scope of work as bid included: new concrete walks; additional concrete parking lots; new site furnishings; three fenced baseball fields; new asphalt trail with lighting; pedestrian connections to the neighborhood; playground and equipment; pavilion; a boardwalk and an wet-lands outdoor classroom.

During the construction the City decided to make additional improvements and issued a change order that included: protective netting at the NCAA ball field; irrigation of all three ball fields; addition of concrete fence on West Little York side of park; addition of chain link fencing along eastern boundry of park; ornamental fencing at both entrances; and ornamental fencing around the stormwater retention pond.
